

Browns or carbon rich materials are critical to the success of a compost pile. They provide energy to the micro-organisms to chomp at the food scraps and determine the texture of the finished compost.

Yet, most backyard composters don't have access to a quality and reliable supply of carbon rich materials.

Subscribe to a regular supply of high quality browns and put your compost bin back on track.

**45 GALLON BAG OF SHREDDED STRAW & 1 GALLON OF COMPOST STARTER - \$15**

**[PURCHASE HERE](#)**

---

This is approximately 6-12 months of carbon supply for a typical backyard compost bin.

Pickup at any of Food2Soil's community compost hubs - 4540 Ocean View Blvd | 5202 Orange Avenue.
